Vehicle Management System

A computerized management system that helps the barangay organize, monitor and manage its emergency response vehicles.

MUST HAVES

- A web-based platform that works on desktop and mobile browsers.
- Role-based access for Super Admin, Admin, Custodian and Maintenance Personnel.
- Account registration with a barangay staff code, a valid ID and a photo, followed by approval before the account can sign in.
- Organized, up-to-date vehicle records, vehicle types and current locations.
- A maintenance workflow: issue report, ticket proposal, Admin approval, mechanic assignment, repair, and Custodian verification before closing.
- Maintenance records and recurring schedules, covering in-house repairs and work sent to an external shop.
- Dashboard summaries for each role.
- Cloud storage for uploaded images and files (issue photos, repair attachments and vehicle documents).
- Email notices for registration approval and staff codes, plus in-app notifications.

Admin functionalities

- Manage vehicle records, vehicle types and locations.
- Monitor vehicle conditions and readiness to respond.
- Manage issue reports and approve or decline ticket proposals.
- Assign Maintenance Personnel and manage maintenance records and schedules.
- View each vehicle's history.
- Generate printable and CSV reports (vehicles, issues, maintenance, schedules, history).
- Monitor the activity log for accountability.
- Approve staff registrations for their barangay.

Custodian functionalities

- View, search and filter vehicle information and availability.
- Report vehicle issues with photo evidence and track their status.
- Check vehicle condition and propose maintenance tickets.
- Verify completed repairs before a ticket is closed.
- View maintenance status and schedules.

Maintenance Personnel functionalities

- View assigned work orders and reported issues.
- Log repair actions, parts used and remarks.
- Update repair progress and completion.
- Manage and monitor upcoming maintenance schedules.
- View maintenance history.

Super Admin functionalities (platform level)

- Review and approve or reject registrations, checking the applicant's ID and photo.
- Manage barangays, users and registration codes.
- View the platform activity log and handle Support Center concerns.
