VMS Demo Workflow

Barangay Vehicle Management System | Final Defense

CORE the main workflow to show in full SETUP quick preparation steps

1 Registration of the barangay and the first Admin

SETUP

ROLE: NEW ADMIN

- Register the barangay and create the first Admin account.
- Sign in as that Admin and show the Admin dashboard.

Result: the barangay exists and has its first Admin.

2 Admin adds a Custodian and a Maintenance account

SETUP

ROLE: ADMIN

- Open Users and create a Custodian account.
- Create a Maintenance Personnel account.
- Point out that each role sees a different sidebar.

Result: all three roles can sign in.

3 Custodian adds a vehicle and updates its condition

SETUP

ROLE: CUSTODIAN

- Register a vehicle (for example an ambulance) with its profile and station.
- Open Condition Monitoring and update the vehicle's condition.

Result: the vehicle appears in the fleet with its availability and condition.

4 Custodian reports an issue and sets a maintenance schedule

CORE

ROLE: CUSTODIAN

- Report Vehicle Issue: choose the vehicle, describe the problem, set severity and attach evidence.
- Propose a maintenance ticket and choose the repair route: **in-house** (a mechanic) or **sent to an external shop**.
- Add the repair lines (root causes and how each will be repaired).
- Create a preventive maintenance schedule (recurring) in Maintenance Schedule.

Result: a ticket in Pending Approval and a schedule on the calendar.

5 Admin approval

CORE

ROLE: ADMIN

- Open the proposed ticket and review it.
- **In-house:** confirm the mechanic the Custodian suggested, or reassign (a reason is required).
- **External shop:** approve the shop repair; no in-house mechanic is needed.
- Show that a ticket can also be declined with a reason.

Result: the ticket becomes Active.

6 Maintenance personnel performs the repair

CORE

ROLE: MAINTENANCE PERSONNEL (IN-HOUSE ROUTE)

- Open My Work Orders and pick the assigned ticket.
- Log the work performed and the parts used; complete every repair line.
- **External route:** the vehicle is sent to the shop and returned, and the repair evidence is attached to the ticket.

Result: the ticket moves to For Verification and the Custodian is notified.

7 Custodian verifies and closes the ticket

CORE

ROLE: CUSTODIAN (INDEPENDENT OF THE REPAIR)

- Check the completed work (for shop repairs, check the returned vehicle).
- **Satisfactory:** approve, and the ticket closes into the archive.
- **Not satisfactory:** disapprove with a reason; the ticket returns for rework.
- Point out that anyone who repaired or handled the work cannot verify it.

Result: a closed, archived ticket and a vehicle back in service.

Core workflow: report and schedule, approve, repair, verify and close (steps 4 to 7).
